- Build and maintain professional relationship with potential partners and investors

Projects

Bar Management Database: [link](#) (solo developer)

- A bar management system, designed to help bar owners manage their inventory and recipes. It includes two sections, an inventory section, and a recipe section. A bar owner can search, do an inventory count, add, and view the inventory section. In the recipe section you can add, lookup and edit recipes for drinks
- SQL, PHP, HTML, CSS

Simple Web Scraping: [link](#) (solo developer)

- Program scrapes a list of jobs with python as the main skill/job, then filters through all the jobs. The user has the option to remove jobs with unwanted skills. Program also return the info via files located in the posts folder.
- Python

Battleship: [link](#) (multiple developers)

- Battleship is a two-player game where each player takes turns secretly placing ships, and then shooting at, and attempting to sink the opposing player's ships. The first player to sink all their opponent's ships wins.
- HTML, CSS, JavaScript, Python, jQuery, Bootstrap
